

Powering America's energy future

83
energy generation assets across 21 states

Avangrid Power, an Avangrid company, is one of the largest wind operators in the United States, with energy generating assets spanning 21 states. We are pioneering a transformational shift how the nation produces and uses energy through innovative generation and transmission technologies. As pioneers in large-scale offshore wind projects, we are shaping the future of safe and reliable energy in the U.S.

2024 financial and operational data

10.2 GW
total installed capacity of power

1.3 GW
onshore and offshore under construction

30 GW
power pipeline by 2030 and beyond

\$2 million
in community support, empowering 62 non-profit organizations

Sustained and consistent onshore growth

8 GW installed
onshore wind capacity
across 69 assets

1.4 GW installed
solar capacity
across 11 states

0.6 GW
thermal capacity
across 2 assets

Vineyard Wind 1: Nation's first utility-scale offshore project

806 MW
offshore wind energy project
about 15 miles off the coast
of Massachusetts

62 wind turbines
spaced 1 nautical mile apart
with each turbine generating
13 MW of electricity

Over 400,000 homes
powered and thousands
of local full-time equivalent
jobs created

Pioneering innovation and empowering the future of energy

Power Control Center
State-of-the-art control center
with 24/7 remote monitoring
and control of power facilities

First generation-only
Balancing Authority to join the
Western Energy Imbalance
Market, ensuring stability of the
region's power system

National Training Center
A world-class training facility
empowers employees with
hands-on experience in cutting-edge
wind and solar technologies
